

WEIGHT LOSS – Total body weight

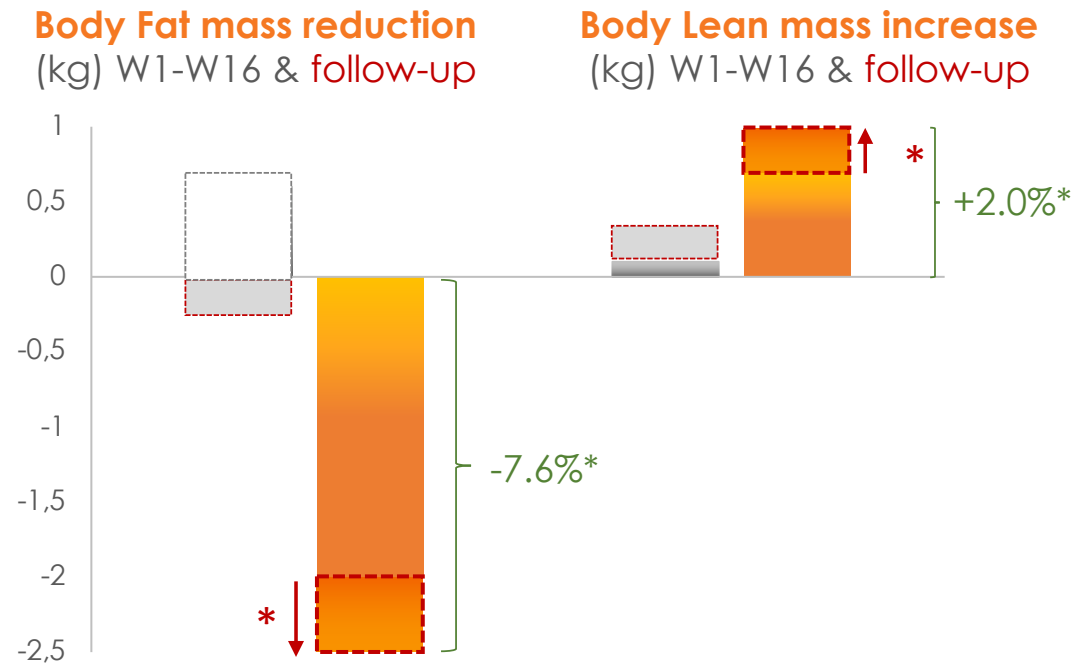

Body weight loss
(kg) W1-W16 & follow-up

- Sinetrol group **continues to loose weight significantly** after the supplementation while no significant difference is observed in the placebo group

- Sinetrol supplementation could prevent the yo-yo effect

BODY FAT & LEAN MASS

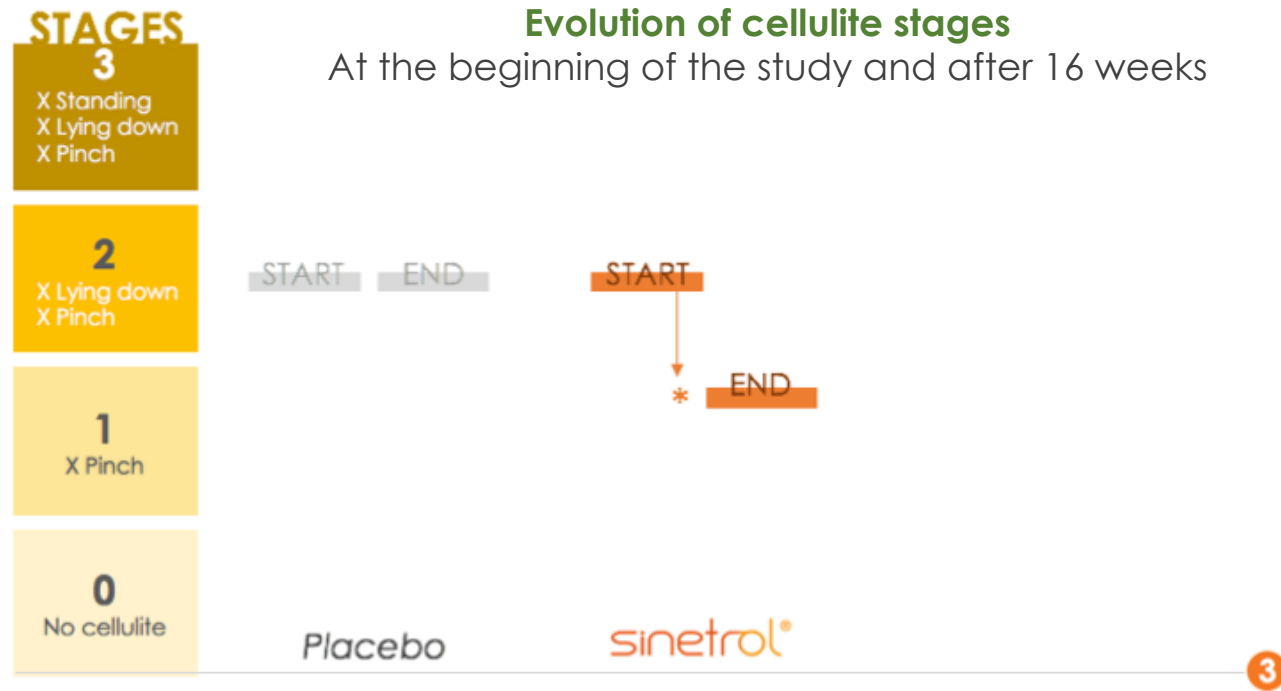

- Fat mass continues to decrease significantly
- Lean mass is still increasing at W20

Body composition benefits led during the supplementation are still observable 4 weeks after the end of the study

CELLULITE

Investigator-Led Dermatological Control: Nürnberger Scale

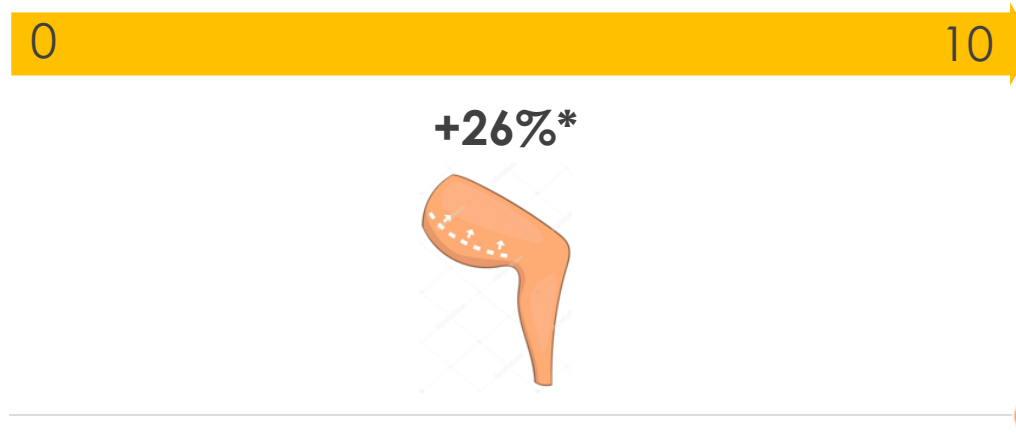

- No significant difference between groups at the beginning of the study
- After 16 weeks, Sinetrol® group **significantly decreased their level of cellulite**

FIRMNESS OF THE SKIN

Self-evaluation of subjects

Evolution of firmness of the skin

At the beginning of the study and after 16 weeks

- No significant difference between groups at the beginning of the study
- After 16 weeks, while no significant difference was observed in the placebo group, subjects supplemented with **Sinetrol®** perceived a **significant improvement of 26% in skin firmness.**
